Higher inflation was due to higher food prices on lead to and on fasting month. In the Board of Governors' Meeting on 17-18 May 2017, Bank Indonesia maintained the BI 7-day (Reverse) Repo Rate (BI-7 day RR Rate) at 4.75%, while maintaining the Deposit Facility (DF) and Lending Facility (LF) rates at 4.00% and 5.50% respectively. Rupiah appreciated by +0.05% to 13,321/USD at end of May 2017 from 13,327/USD in previous month. Indonesia's foreign reserves increased \$1.703bn to \$124.953bn in May 2017 from \$123.25bn in Apr 2017. The increase was primarily attributable to foreign exchange receipts, among other from tax revenues and government oil & gas export proceeds, as well as auction of Bank Indonesia foreign exchange bills. S&P upgraded Indonesia rating to BBB-/stable from BB+/positive on the back of improvement in the budget. "The government's new focus on realistic budgeting has lowered the risks that budget deficits will widen significantly when government revenue disappoints," S&P said.

IDR government bond yields closed mixed across the curve in May 2017 with slightly higher yield in short tenor and lower yield in middle to long tenor. Bond market started in quiet tone despite news of winning Macron in French election. Negative sentiment came from news of former Jakarta Governor Ahok sentenced 2 years in jail for blasphemy, and global risk-off on US political situation. Positive sentiment came from S&P upgraded Indonesia rating to investment grade, causing huge demand in auction on last May 23th. Indonesia sold Islamic bonds to hajj fund in private placement, on June 2, 2017 with the nominal of issuance IDR300bn. The issuance consists of one series tradable Sukuk Negara, which is PBS-009, with coupon fixed 7.75% per annum, and yield 5.85%. Offshore accounts increased their holding by IDR +10.33tn in May 2017 (+1.39% MoM), from IDR 745.82tn as of Apr 2017 to IDR 756.15tn as of May 2017, which brought their holding to 39.15% of total outstanding tradable government bond (from 39.10% in the previous month). Index broke thru all-time high in May on the back of S&P raised Indonesia's long-term sovereign credit rating to investment grade BBB-. Indonesia's Fiscal Reform became the key factor driver on the rating upgrade. Investors, foreign in particular, reacted positively as the rating upgrade could drive further capital inflows and lower credit cost will reflect to better economic growth for both the public and private sectors. While we remain constructive on the Indonesian economy as a whole over the longer term, equity markets remains on the rich side in terms of valuation. Potential further social disruption and political instability will increase risk aversion to the market in the short to medium term. Sector wise, the Consumer Sector was the best performing sector during the week, gaining 3.42% MoM. Ticker wise, ULTIJ (Ultrajaya Milk Industry & Trading Co Tbk) and KAEF (Kimia Farma Persero) were the movers, appreciating 21.43% and 12.65% MoM respectively.
