Manager Commentary

Central Bureau Statistics of Indonesia (BPS) announced Aug 2020 deflation at -0.05% mom (vs consensus inflation +0.01%, -0.10% in July 2020). On yearly basis, inflation was +1.32% yoy (vs consensus inflation +1.40%, +1.54% in July 2020). Core inflation was printed at +2.03% yoy (vs consensus inflation +2.00%, +2.07% in July 2020). The monthly deflation was contributed by the deflation on volatile food and administered price group. The deflation on volatile food group was affected by the declining of chicken, onion, and rice price, while the administered price group was impacted by the declining of transportation cost. The core inflation was contributed by the increment of gold price. In the Board of Governors' Meeting on 18-19 Aug 2020, Bank Indonesia hold the BI 7-day Reverse Repo Rate at 4.00%, and also hold the Deposit Facility (DF) and Lending Facility (LF) rates at 3.25% and 4.75% level, respectively. This policy is expected to maintain the external stability in line with their expectation that the inflation remain low. Rupiah slightly appreciated by +0.68% from 14,653 at the end of July 2020 to 14,554 at the end of August 2020. Indonesia's trade balance recorded surplus amounting to USD +3,263mn in July 2020 vs previous month surplus USD +1,268mn. The surplus was caused by better number in export which was supported by the increment on commodities prices, especially CPO price and also the increasing in export number for iron & steel, especially to China. Non-oil and gas trade balance in July 2020 recorded surplus USD +3,516mn, which was higher than the previous month that recorded trade surplus amounting to USD +1,372mn. Meanwhile, oil and gas trade balance still recorded deficit to USD -253mn in July 2020, which was higher than the deficit on June 2020 amounting to USD -95mn. Indonesia's official foreign reserve as of Aug 2020 was at USD 137.0 billion, higher than July 2020's number at USD 135.1 billion. The increment of foreign reserve was supported by the withdrawal of government loans and oil & gas export proceeds.

IDR Government bond yields were closed mixed which is lower on short tenor and higher on the medium to long tenor. The lower yield on short tenor was supported by the onshore banks buying action, while offshore names still recorded net outflows. Bond market was quiet volatile last month. Market was opened with bearish tone which was caused by the contraction on US economic growth by -32.9% QoQ and the rising tension between US and China again. Then, global risk on sentiment were seen in the market which was supported by the rising hope for Covid-19 vaccine in the near term, and also the announcement from FED for their new policy framework which indicated that they will maintain lower interest rate for long time. While from domestic, the affirmation from Fitch for Indonesia's rating on BBB and the unchanged of 7DRR by Bank Indonesia, also give positive sentiment to market. Last month, MoF succeed to issue new bonds two times on private placement which the only buyer was Bank Indonesia with burden sharing scheme. This issuance is expected to finance Public Goods amounting to IDR 397.56tn. The total issuance itself is amounting to IDR 99.08tn with four new bonds, as follows: VR34 (2025), VR35 (2026), VR36 (2027), and VR37 (2028). The coupon for these bonds is 3.8% for the first three months. Offshore accounts decreased their holding by IDR -3.85tn in Aug 2020 (-0.41% MoM), to IDR 941.94tn as of 31 Aug 2020 from IDR 945.79tn as of 30 July 2020, which brought their holding to 28.24% of total outstanding tradable government bond (from 29.77% in the previous month). The 5Y yield Aug 2020 ended -42bps lower to +5.54%(+5.96% in July 2020), 10Y tenor ended +4bps higher to +6.87%(+6.83% in July 2020), 15Y tenor ended +13bps higher to +7.40%(+7.27% in July 2020) and 20Y tenor ended +3bps higher to +7.45%(+7.42% in July 2020).

The JCI ended the month higher at 5,238.49 (+1.73% MoM). Market movers were BBRI, RMBA, ICBP, INDF, and BBNI as they rose 11.08%, 158.47%, 11.14%, 18.22% and 10.87% MoM respectively. Global market closed the month on a positive note as positive news on COVID-19 vaccines development. In addition to that, US economic data were also supportive as well as the FED unveiled adjustment to inflation targeting to allow for an overshoot above its 2% target, thus facilitating current low rates to persist longer. In turn inflation is a means of growth which generally is supportive of the equity market in the short run. On the domestic front, manufacturing and infrastructure activities have gradually improved post reopening, which can be seen within the Auto and cement sectors which saw double digit growth on a monthly basis. The proposed FY21 fiscal budget which was announced during the Independence Day speech focuses heavily on economic recovery which were also supportive of the market. However, we can't rule out that the continued rise in new daily cases which had reached record high above 2,500/day has raised the risk that economies could re-enter into lockdown to curb the spread of the virus. All in all, the latest developments in the vaccine helps spur some confidence within the business community despite the spike in daily new infection cases. Timeliness is crucial as to when vaccines are commercially available in order to gauge the return to normal trajectory. Sector wise, the Finance Sector was the best performing sector during the month, gaining 4.42% MoM. Ticker wise, AGRO (Bank Rakyat Indonesia Agroniaga) and BBKP (Bank Bukopin Tbk) were the movers, appreciating 63.79% and 60.67% MoM respectively. This was followed by the Consumer Sector which rallied 2.5% MoM. Ticker wise, RMBA (Bentol Internasional Investama) and KAIF (Kimia Farma Persero) posted 158.47% and 35.11% MoM gains respectively. On the other hand, the worst sector during the month was the Infrastructure, Utilities and Transportation Sector, which recorded a decline of 5.22% MoM. Ticker wise, FREN (Smartfren Telecom) and BULL (Buana Listya Tama) were the laggards which fell 37.06% and 12.35% MoM respectively.
