### Manager Commentary

The Asian market had an overall return of 0.76% for the month of March. The top performers for the month were Singapore (+5.05%) and Thailand (+2.45%). The bottom performer for the region were China (-6.28%) and the Philippines (-4.47%). Singapore was a top performer led by the consumer discretionary and real estate sectors. Thailand was a top performer led by the consumer staples and real estate sectors. China was a bottom performer due to a lagging performance in the communication services and materials sectors. The Philippines was a bottom performer due to a lagging performance in the real estate and financials sectors.

Central Bureau Statistics of Indonesia (BPS) announced March 2021 inflation at +0.08% mom (vs consensus inflation +0.12%, +0.10% on Feb 2021). On yearly basis, inflation was +1.37% yoy (vs consensus inflation +1.40%, +1.38% on Feb 2021). Core inflation was printed at +1.21% yoy (vs consensus inflation +1.44%, +1.53% on Feb 2021). The lower inflation in March 2021 was caused by the lower core inflation. The decline in core inflation was mainly driven by deflation in auto commodities in line with the provision of incentives to reduce the Sales Tax on Luxury Goods (PPnBM) rates for certain motor vehicles and deflation in the gold jewelry commodity that continued in line with the slowing of global gold inflation. The BI Board of Governors agreed on 17-18 March 2021 to hold the BI 7-Day Reverse Repo Rate to be 3.50%, and also hold the Deposit Facility (DF) and Lending Facility (LF) rates to be 2.75% and 4.25%, respectively. This policy is in line with lower inflation expectation, stable Rupiah currency, and also to push the economic recovery. Rupiah depreciated against USD by -2.41% from 14,229 at end of Feb 2021 to 14,572 at end of March 2021. Indonesia's trade balance recorded surplus amounting to USD +2,010mn in Feb 2021 vs previous month surplus USD +1,959mn. The support for trade surplus were still coming from higher export of iron and steel to China, and also the increment of vehicle export to ASEAN and Japan. Non-oil and gas trade balance in Feb 2021 recorded surplus USD +2,445mn, which was lower than the previous month that recorded trade surplus amounting to USD +2,627mn. Meanwhile, oil and gas trade balance still recorded deficit to USD -443mn in Feb 2021, which was lower than the deficit on Jan 2021 amounting to USD -668mn. Indonesia's official foreign reserve as of March 2021 was at USD 137.1 billion, lower than February 2021 number at USD 138.8 billion. The lower of foreign reserve was caused by the external government debt payment.

The JCI ended the month lower at 5,985.52 (-4.11% MoM). Market laggards were BBKA, BBRI, UNVR, MEGA, and INCO as they fell -7.38%, -6.58%, -6.07%, -19.23% and -27.9% MoM respectively. Global equity market continued its rally in March as optimism builds on the basis of a massive USD1.9tn of US fiscal stimulus as well as better than expected growth expectation within developed markets, which was seen through the strong recovery in manufacturing data as well as jobs data. As such, there has been an upward revision on US 2021 GDP growth numbers to 6.5%, from previously 4.2%. Despite the strong economic recovery in the US and other developed nations, volatility remains on the rise in March as market argues the stronger than expected growth would potentially result in an inflation overshoot, in turn pressuring the central banks to tapering sooner than expected. Such anticipation had resulted in the rapid rise in global bond yields, which subsequently triggered sell-offs within emerging market equities such including Indonesia. Within the Indonesia equity market, several catalysts have been playing out on the domestically but the emerging market equities sell-off has led the IDR to weakened to IDR 14.5k/USD. Despite the high volatility, current valuation of 16x FY21 P/E seems fair given the expectation of strong economic recovery post vaccination and potential upcoming Indonesian tech IPOs in 2021-2022. Sector wise, the Mining Sector was the worst performing sector during the month, declining 13.84% MoM. Ticker wise, INCO (Vale Indonesia) and TINS (Timah Persero) were the laggards, depreciating 27.9% and 27.25% MoM respectively. This was followed by the Finance Sector which dropped 5.92% MoM. Ticker wise, BBYB (Bank Yudha Bhakti) and MAYA (Bank Mayapada International) posted 40.84% and 38.85% MoM losses respectively. On the other hand, the best sector during the month was the Basic Industry Sector, which recorded a gain of 0.27% MoM. Ticker wise, CTBN (Citra Tubindo) and JPFA (Japfa Comfeed Indonesia) were the movers which rose 42.32% and 25.08% MoM respectively.
