Manager Commentary

Central Bureau Statistics of Indonesia (BPS) announced March 2020 inflation at +0.10% mom (vs consensus inflation +0.13%, +0.28% in February 2020). On yearly basis, inflation was +2.96% yoy (vs consensus inflation +2.92%, +2.98% in February 2020). Core inflation was printed at +2.87% yoy (vs consensus inflation +2.76%, +2.76% in February 2020). The lower monthly inflation was affected by the deflation in volatile price (fish & garlic price) and administered price (airfares). While the higher core inflation was contributed by higher of gold price. In the Board of Governors' Meeting on 18-19 March 2020, Bank Indonesia cut the BI 7-day Reverse Repo Rate by 25bps to be 4.50%, and also cut the Deposit Facility (DF) and Lending Facility (LF) rates by 25bps to be 3.25% and 5.25%, respectively. Bank Indonesia also announced seven monetary policies that are expected to help the Indonesia's economics, as follows: 1) triple intervention for FX spot, DNDF, and bond market; 2) adding repo facility up to 12 months, 3) adding frequency of FX swap to be every day, 4) expanding the 50bps RRR cut, 5) enhancing FX term deposit instrument, 6) implemented vostro rupiah account for foreign investor as underlying of DNDF transaction, and 7) strengthening the payment system to mitigate the spread of Covid-19. Rupiah depreciated by -15.00% to 16,367/USD at end of March 2020 from 14,234/USD previous month. Indonesia's trade balance recorded surplus amounting to USD +2,336mn in February 2020 vs previous month deficit USD -864mn. The trade surplus was contributed by higher export number for non-oil and gas sector, especially the higher demand from China for coal and also the increasing of CPO price. Non-oil and gas trade balance in February 2020 recorded surplus USD +3,268mn, while the previous month resulted deficit amounting to USD -361mn. Meanwhile, oil and gas trade balance still recorded deficit to USD -932mn in February 2020, but the deficit is lower than the deficit on January 2020 amounting to USD -1,181mn. Indonesia's official foreign reserve as of March 2020 declined by USD 9.40bn to USD 121bn, lower than February 2020's number at USD 130.40bn. The declining of foreign reserve was caused by paying external government debt and for stabilizing IDR currency in this current situation.

USD government bond yields closed higher across all curves which was caused by offshore outflows. The offshore outflows was a nightmare for Indonesia's bond market where we are still depended to portfolio investment due to lower FDI. The pressures of selling action were coming from both of external and internal factors which was caused by the fearing of Covid 19 pandemic. Thankfully, there was Bank Indonesia defending the market from falling deeper. To fight the impact of Covid-19 to Indonesian economy, Government finally announced a 'Substitution of Government Regulations' which they planned to increase the portion of budget deficit to 5.07% of GDP (current 3%) and the projection of 2020's growth is lowered to be 2.30%. In order to help for financing the government budget, Government also announced the recovery bonds where Bank Indonesia can buy bonds in primary market. Indonesia's CDS 5yr level was significantly higher in March 2020 compared with previous month, from 88/92 to 206/216. The 5Y yield Jan 2020 ended +51bps higher to +3.23%(+2.72% in Feb 2020), 15yr tenor ended +80bps higher to +4.61%(+3.36% on Feb 2020), 25yr tenor ended +79bps higher to +4.41%(+3.62% on Feb 2020), and 30yr ended +3bps higher to +3.50%(+3.47% on Feb 2020).

In regards to our recent portfolio we maintain the strategy, and tactically do portfolio rebalancing to capture market momentum.
