Manager Commentary

For the month, risk assets advanced with US equities, convertible securities, and high-yield bonds finishing higher. Over the period, markets digested positive US economic data, a less accommodative US Federal Reserve (Fed), yield curve flattening, COVID-19 resurgence concerns, and US fiscal policy developments. Most US reports suggested continued economic strength. Unemployment declined, leading indicators increased, and consumer confidence surpassed estimates. On the other hand, housing statistics were mixed, and November's Consumer Price Index (CPI) report showed inflation hitting the highest level since 1982. As widely expected, the Fed doubled the monthly pace of asset purchase tapering to USD 30 billion. Additionally, the median interest rate forecast showed three hikes in both 2022 and 2023, followed by a slower cadence in 2024. Elevated investor angst heading into December's Fed meeting eased after uncertainty was removed.

Against this macro backdrop, US Treasury yields rose across the curve. A sharper move at the short end caused the curve to flatten. At period-end, the 3-month, 2-year, 5-year and 10-year yields finished at 0.05%, 0.73%, 1.26%, and 1.50%, respectively. COVID-19 resurgence concerns increased on Omicron-related headlines as the strain showed to be more contagious than other variants but also less severe. The US Food and Drug Association's (FDA's) emergency use authorisation of an oral antiviral candidate helped reduce some concern. Congress passed legislation to raise the debt limit, mitigating a short-term market risk. On the other hand, President Biden's "Build Back Better" bill stalled after senator Joe Manchin opposed the package.
