Manager Commentary

Central Bureau Statistics of Indonesia (BPS) announced May 2022 inflation +0.40% mom (vs consensus inflation +0.41%, +0.95% in Apr 2022). On yearly basis, inflation was +3.55% yoy (vs consensus inflation +3.59%, +3.47% in Apr 2022). Core inflation was printed at +2.58% yoy (vs consensus inflation +2.70%, +2.60% in Apr 2022). The lower monthly inflation compare to previous month was impacted by the lower inflation in volatile food and administered prices group. The lower inflation on volatile food group was impacted by the deflation on CPO price due to the implementation of temporary export ban. While, lower inflation on administered prices group was impacted by the normalization on public transportation post Idul Fitri. The BI Board of Governors agreed on 23-24 May 2022 to hold the BI 7-Day Reverse Repo Rate at 3.50%, and also hold the Deposit Facility (DF) and Lending Facility (LF) rates at 2.75% and 4.25%, respectively. This policy is in line with stable inflation, exchange rate, stable financial system amid higher external pressure which impacted by the rising tension between Russia and Ukraine, and the acceleration of monetary normalization globally. However, Bank Indonesia revised the increment of rupiah reserve requirements from previously up to 300bps to be 550bps for conventional banks (GWM to be 9% per September 2022) and from previously up to 150bps to be 400bps for sharia banks and sharia business units (GWM to be 7.5% per September 2022). Rupiah depreciated against USD by -0.77% from 14,480 at end April 2022 to 14,592 at end of May 2022. Indonesia's trade balance recorded surplus amounting to USD 7,557mn in Apr 2022 vs previous month surplus USD 4,530mn in March 2022. The trade surplus was still supported by the higher global commodity prices, especially coal and CPO. The lower imports which was impacted by the China's lockdown, was also the reason behind higher trade surplus. Non-oil and gas trade balance in April 2022 recorded surplus USD +9,938mn, which was higher than the previous month that recorded trade surplus amounting to USD +6,617mn in March 2022. Meanwhile, oil and gas trade balance still recorded deficit to USD -2,381mn in April 2022, which was higher than the deficit in March 2022 amounting to USD -2,087mn. Indonesia's official foreign reserve in the end of May 2022 was at USD 135.6bn, relatively similar with April 2022 number at USD 135.7bn. The delopment in foreign reserve was impacted by oil and gas foreign exchange receipts, tax and services receipts, and also the obligations of government's external debt payment.

The JCI Index ended the month lower at 7,148.97 (-1.11% MoM). Market laggards were EMTK, TLKM, BBRI, BBKA and ARTO as they fell -35.95%, -6.71%, -4.93%, -4.62% and -19.53% MoM respectively. Global stock markets movement was mixed in the month of May as growth continue to underperform value stocks on the back of rising bond yields. Global equity market was hammered in the first half of May amid higher-than-expected U.S. CPI print but quickly recovered its losses in May on bets of a possible slowdown in U.S. monetary tightening and after an easing of COVID restrictions in China. Moving to Indonesia, Indonesia stock market tracked its global peers movement as combination of rise in bond yields, depreciating rupiah led to foreign investors sold some of its position in the Indonesia stock market in May. On the valuation front, the JCI currently trades at 2022 earnings multiple of 16.1x, which is slightly above its mean but considering low foreign investors positioning combined with improving economic activity, strong commodity prices, ongoing tax amnesty and more technology company IPOs, we believe investors' appetite in Indonesian stocks will continue to improve in the longer run but expect volatility to be elevated. Sector wise, the Technology Sector was the worst performing sector during the month, declining 11.40% MoM. Ticker wise, EMTK (Elang Mahkota Teknologi) and WIRG (Wir Asia Tbk) were the laggards, depreciating 35.95% and 26.82% MoM respectively. This was followed by the Finance Sector which dropped 5.90% MoM. Ticker wise, BBHI (Allo Bank Indonesia) and BNBA (Bank Bumi Arta) posted 32.31% and 23.13% MoM losses respectively. On the other hand, the best sector during the month was the Transportation and Logistic Sector, which recorded a gain of 21.82% MoM. Ticker wise, SMDR (Samudera Indonesia) and TMAS (Temas Tbk) were the movers which rose 75.00% and 67.37% MoM respectively.

For portfolio strategy, we are progressively shifting to increase non defensives cyclical exposures on economic recovery expectation in 2022. We are constructive on the new economy sector as well as green energy value chain related sectors. Generally speaking, our preference on equities that have pricing power, efficient balance sheet and good corporate governance has not changed regardless of condition.

About Allianz Indonesia
