Manager Commentary

Asia equity market corrected further in the month of September on the back of hawkish statement by the Fed that sent 10Y US government yield up by 47bps MoM to 4.58%. The European markets also posted corrections in September on the back of recent hawkish statement by the Fed and ECB. US Equity market also posted negative return in September as investors starting to price in a high chance that we may be living in a higher interest rate environment for longer period of time on the back of still stubborn inflation that is still above the Fed's desired target of 2%. Global equities retreated as more resilient-than-expected economic data reinforced central bank messages that interest rates would need to be kept at higher levels for a considerable length of time to bring down inflation. Japanese and UK equities defied the broader market decline, but elsewhere returns were mostly negative. At a sector level, energy stocks fared the best, gaining as oil prices rallied. In contrast, information technology was the weakest sector, with semiconductor foundry TSMC warning that the recent boom in artificial intelligence interest was not sufficient to offset a broader slowdown in demand. US government bonds fell, undermined by a growing sense that US rates would stay higher for longer and as investors started to worry about a potential shutdown of the US government. The yield on the US 10-year Treasury note reached 4.65%, its highest level since July 2007, while the yield on the two-year note briefly touched 5.2%, a level last seen almost 23 years' ago. With yields at the longer end of the curve rising the most, the inversion of the yield curve (2s to 10s) lessened to around 50 basis points (bps) compared to around 75 bps at the end of August.

About Allianz Indonesia
