Global stock markets rebounded in July despite continued monthly inflation surprise as recent pullback in the commodities as well as improvements in the global supply chain side resulted in investors taking a view that inflation may be peaking soon. During the Fed meeting in July, The Fed raised its FFR rate by 75 bps and mentioned that it will likely become appropriate to slow down the pace of increases while it assesses how the monetary tightening is affecting the economy and inflation. In Addition, the Fed also reassured the market that it does not think that the US economy is in recession, given the strong labor market. All these factors improved investors sentiment towards the global equity market in July. Moving on to Indonesia, Indonesia equity markets underperformed its developed market peers in July as combination of higher inflation, currency weakening triggered foreign outflows out of the Indonesia equity market. On the valuation front, the JCI currently trades at 2022 earnings multiple of 16.2x, which is slightly below its mean but considering low foreign investors positioning combined with improving economic activity, we believe investors' appetite in Indonesian stocks will continue to improve in the longer run. However, we can't rule out that recession risk could pressure commodity price which in turn would Indonesia's fiscal balance vulnerable.
