The higher inflation on March 2022 was impacted by the higher of volatile food and administered price group. The BI Board of Governors agreed on 16-17 March 2022 to hold the BI 7-Day Reverse Repo Rate at 3.50%, and also hold the Deposit Facility (DF) and Lending Facility (LF) rates at 2.75% and 4.25%, respectively. This policy is in line with stable inflation, exchange rate and financial system amid higher external pressure. Rupiah appreciated against USD by +0.08% from 14,369 at end of Feb 2022 to 14,357 at end of March 2022. Indonesia's trade balance recorded surplus amounting to USD 3,826mn in Feb 2022 vs previous month surplus USD 933mn in Jan 2022. The higher trade balance surplus in Feb 2022 was impacted by higher non-gas export by +6.60% which mostly caused by higher coal export on the back of the lifting of a ban on coal export. Non-oil and gas trade balance in Feb 2022 recorded surplus USD +5,733mn, which was higher than the previous month that recorded trade surplus amounting to USD +2,261mn in Jan 2022. Meanwhile, oil and gas trade balance still recorded deficit to USD -1,907mn in Feb 2022, which was higher than the deficit in Jan 2022 amounting to USD -1,328mn. Indonesia's official foreign reserve in the end of March 2022 was at USD 139.1bn, slightly lower than Feb 2022 number at USD 141.4bn due to external debt payment.

Global stock markets rebounded in March as improvements were made on the Russia and Ukraine war as Russia agreed to civilian evacuations in some part of the cities. This provided some relieve for the equity market and hope for an end to the war soon. Global market also rallied post Fed first rate-hike announcement on March 16th, which was the Fed's first rate hike since December 2018. The Fed approved a 25bps rate hike, which was lower than consensus expectations of 50bps but mentioned that they will not be hesitant to raise further depending on the inflation level in the coming months. Moving to Indonesia, Indonesia stock market appreciated without exception during March by 2.66% MoM. The surge in commodity prices continue to benefit Indonesia's trade balance given its significant export contribution from commodity exports. On the valuation front, the JCI currently trades at 2022 earnings multiple of 15.8x, which is slightly above its mean but considering the already low foreign investors positioning combined with improving economic activity, strong commodity prices, upcoming tax amnesty and more technology company IPOs, we believe investors' appetite in Indonesian stock market will sustain to be incrementally positive going forward. Sector wise, the Energy Sector was the best performing sector during the month, gaining 11.85% MoM.
